ABSTRACT

Now a days cancer is one of the most important factor of death in the world so we decided to introduce people one of the easiest way of it's prevention. However, the relation between green tea and cancer is not completely identified but the research shows that drinking green tea reduce the state of cancer.

First we found some information about the green tea compounds then we investigated the cancer factors in different countries and stidied the experiments among 900 women showed that drinking tea reduce the state of ovary cancer.

Green tea contains A, B, C, D vitamins & Fe, folic acid &also minerals such as Ca, K, Zn. This useful soft drink is a strong Anti-oxidant so prevent any kinds of cancer & blood clot. Therefore it reduce the state of heart attack. (Up to 31%)

So it is not only prevention factor but also it can open a new way to cure different cancers.

評語

The idea/motivation is good but little data were presented.
